

# NA76xxC Series Vector Network Analyzer

## Main Features

- 12.1" 1280x800 TFT touchscreen
- Wide frequency range: 100kHz to 8.5 GHz
- High dynamic range: 128dB (Typical)
- Very low noise floor: <0.005dB rms (at 3kHz IFBW)
- Fast measurement speed: 50 µsec/point
- Accurate error correction and calibration function
- Connect with other systems via USB, LAN, and GPIB ports
- Software-enabled updates and measurement options available without the need to return to the factory or a factory authorized service center
- Intelligent assembly line structure enables automated factory production testing

## Overview

Launched by Deviser Instruments Inc, the newly redesigned NA76xx Vector Network Analyzer (VNA) Series replicates most of the previously available applications which were already based on customer feedback. The new generation of VNA incorporates years of additional customer comments and allowed Deviser Instruments to fine tune the frontpanel layout, additional features such as 2 ports, along with an extended product line up providing customers with more choices .

The new VNA line up offers additional models with frequency ranges spanning from 100kHz to 3.0 GHz, 3.5 GHz, 6.0 GHz, and 8.5 GHz suitable for wireless communications, radio and television, automotive electronics, semiconductors, medical devices Parts and other RF related industries. R & D and production components applications, consumer products, industry, scientific research and education, military and other fields, provide high efficiency and testing means flexibility.

With the introduction, deployment and commercialization of 5G communications, the NA76xx series VNA allows you to target key 5G communication hardware devices such as; filters, amplifiers, isolators, NR5G antennas, feeders, etc., allowing for fast and efficient functions performance testing. For example; testing filters in 5G communications, the NA76xx VNA provides an efficient and wide dynamic range filters from three dimension: up to 128dB wide dynamic range test ability, unmatched measurement speed and accurate error correction/calibration function ensuring optimum test accuracy. Using a combined test profile, the NA76xx VNA can perform limit, ripple and bandwidth tests quickly, efficiently and accurately, reducing overall cost of testing.

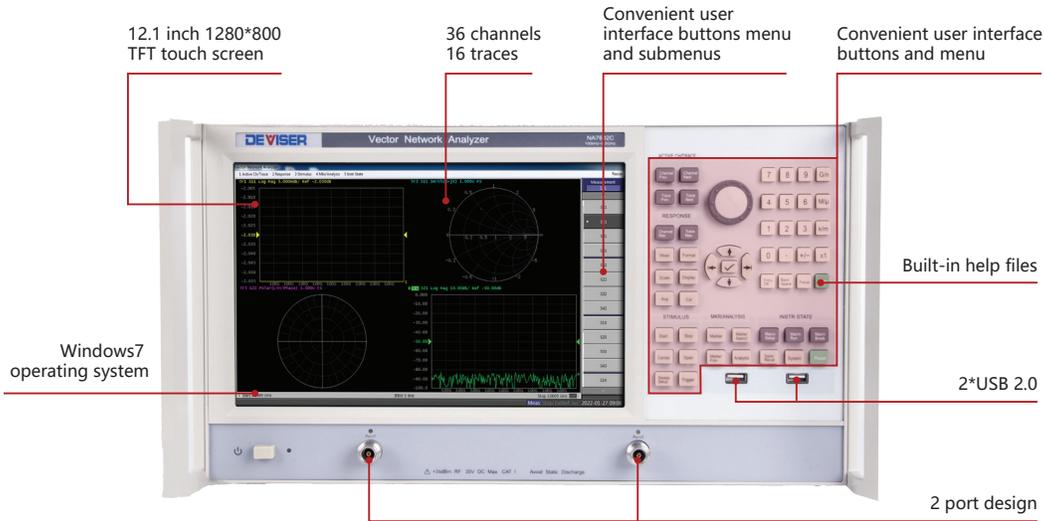

## Practicality on site

The NA76xx Series VNA features a large high resolution 12.1", 1280\*800 LCD color touchscreen optimized for ease of use. Multi-window functionality allows users to work with dialog boxes, measurement channels, and traces on the same screen. The user can drag-and-drop components with the touch screen or mouse, and rename measurement channels and traces for easy analysis.

Instantly recall saved instrument settings with the NA76xx Series' multiple configuration profiles. Customize and save your settings to a memory profile, then simply recall the saved profile at a later date for a quick setup prior to making measurements, or use those profiles for an automated testing sequence, saving valuable on-site testing time and reducing OPEX.

## Model Guide

Model	Frequency	Impedance	Number of ports
NA7632C	100kHz to 3GHz	50Ω	2-ports
NA7635B	100kHz to 3.5GHz	75Ω	2-ports
NA7662C	100kHz to 6GHz	50Ω	2-ports
NA7682C	100kHz to 8.5GHz	50Ω	2-ports

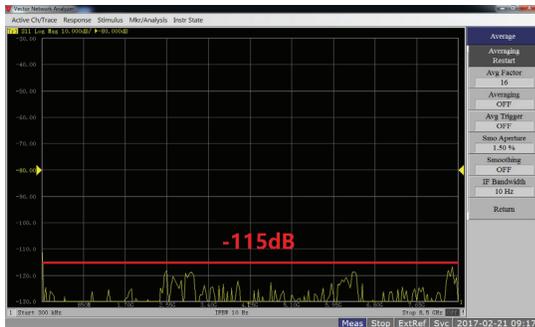

### Features and performance comparable to world-class equipment

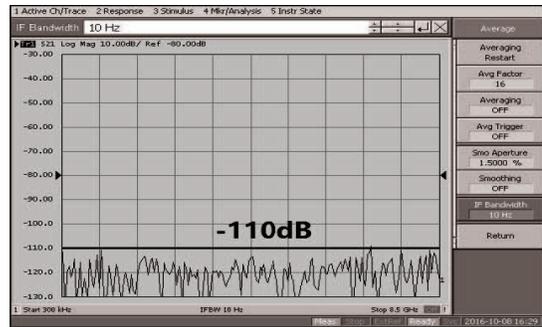

The NA76xx Series Vector Network Analyzer addresses valuable customer feedback with the latest advances in international test and measurement development. It offers broad functionality and performance specifications equal to competitive world-class brands at an extremely competitive price point.

### Wide dynamic range

The NA76xx Series offers a very impressive > 123dB (typical 128dB) of dynamic range for extreme measurement accuracy. The NA7682C's noise floor can reach <-113dB (typical <-118dB) under optimal conditions (0dBm output, RBW = 10Hz), compared to popular competing analyzer reaching in the range of <-110dB.

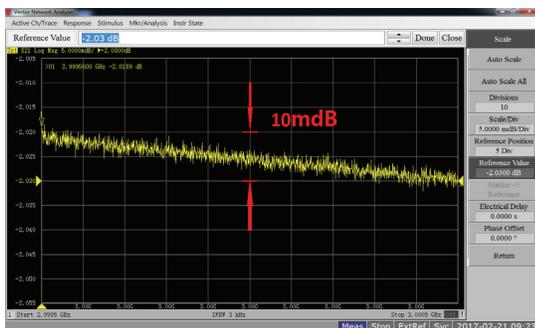

NA76xx

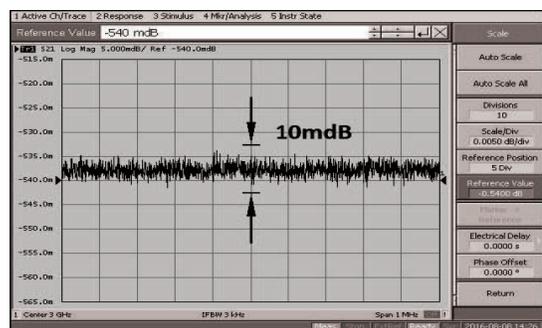

Competitive international brand

### Low trace noise

The NA76xx Series noise floor sensitivity will compare easily with leading products worldwide, reaching under 0.005dB rms (RBW @ 3kHz). This helps minimize errors and produce best/high-quality measurement data for various applications.

NA76xx

International famous brand

### High stability

NA76xx Series analyzers provides excellent overall stability, standing the test of time and temperature without accuracy degradation. The test engineer can safely rely on low amplitude and phase drift consistency when measuring S-parameters, measurement results and repeatability are achieved without recalibration within a few days after a calibration.

### Fast measurement speed

With exceptional measurement speed, the NA76xx Series VNA models can increase productivity and overall engineer efficiency.
